- Only providers who have registered as H1N1 providers with the North Dakota Department of Health may order H1N1 vaccine.
- Providers may submit orders for H1N1 vaccine once per week.
- Providers may order a one to two-week supply of H1N1 vaccine.
- If possible, providers ordering larger quantities of vaccine should try and order in 100-dose increments by vaccine type.
- If preferred packaging is not available, providers will automatically be given what is available (i.e., if a provider wants multi-dose vials, but only syringes are available, then syringes will be ordered).
- Providers should allow at least one week for delivery.
